Kastle Systems Launches RealPage Integration to Enable the Most Efficient Access Control Management for Multifamily Properties
Kastle Access Control Management Connects to RealPage OneSite Resident Data

FALLS CHURCH, VA (December 3, 2019) – **Kastle Systems International**, the industry leader in advanced managed security systems and services, announced the release of Kastle's direct access control software integration with the RealPage® OneSite property management software platform. This new feature offers RealPage Onesite users the ability to reuse the initial RealPage data as the authoritative source for resident data across other critical community systems including access control and smart locks.

What this Kastle integration provides to RealPage Onesite customers is simultaneous enrollment between the RealPage and the Kastle databases such that the data collected by the RealPage customer in the initial leasing process simultaneously feeds the Kastle database as well. Access privileges and credentials activate and deactivate automatically based on the information managed in OneSite. Kastle's integration eliminates data inconsistencies, reduces tedious data entry of redundant resident records, and improves security by automatically revoking a renter's property access the moment their lease is terminated the RealPage database.

This integrated solution represents a breakthrough in technological and operational cost efficiency. Kastle is now able to unify previously disparate operations across the multifamily technology ecosystem from access control, video surveillance and security monitoring to smart elevators and door locks, visitor management and now, identity management. This creates greater efficiency by integrating data and management of security functions.

"By integrating with RealPage, Kastle creates a more convenient and efficient experience for RealPage users" said Haniel Lynn, CEO of Kastle Systems. "This demonstrates the functional flexibility that an open-standards platform like Kastle's can provide."
